PLANTERIA'S COMMITMENT TO THE UN SUSTAINABLE DEVELOPMENT GOALS

SUSTAINABLE DEVELOPMENT GOAL

PLANTERIA'S CURRENT AND FUTURE ACTIONS

Planteria pledges to utilise cleaner energy sources such as the potential to add solar panels to the roof of the existing/future warehouses. Additionally, Planteria has already incorporated energy-efficient practices in their offices which includes energy-efficient lighting and continual monitoring of HVAC systems, which helps reduce overall energy consumption.

By incorporating green biophilic design and natural materials into corporate spaces it helps create sustainable and resilient urban spaces and helps promote healthier environments. Planteria helps reduce the environmental impact of buildings with the goal of reducing the adverse per capita environmental impact of cities especially London which is a primary location of Planteria's clients.

Planteria aims to continually search for sustainable suppliers to ensure that their supply chain is environmentally conscious by sourcing plants and materials from suppliers who use renewable energy and sustainable practices. Planteria also has a shuttle service for plants used by the field staff which helps cut costs and emissions. Planteria's weekly fresh flower displays are carefully packed for transport using completely re-cycled packaging, which is reused each week. The old display is collected and brought back to HQ where the vases are washed, and the flowers are composted.

Planteria have committed to quantifying emissions annually (with 2023 being their first year and base year). Within this, Planteria have aimed to become net zero by 2050 with 0 scope 1 or 2 emissions and minimal scope 3 emissions. Furthermore, Planteria has begun adopting sustainable practices in their own operations, such as using energy-efficient systems, reducing water usage, and minimising their carbon footprint. These pledges help drive sustainable change towards climate action.
